

MÓDULO DOCREADER

Módulo para extraer texto de documentos PDF y XPS.

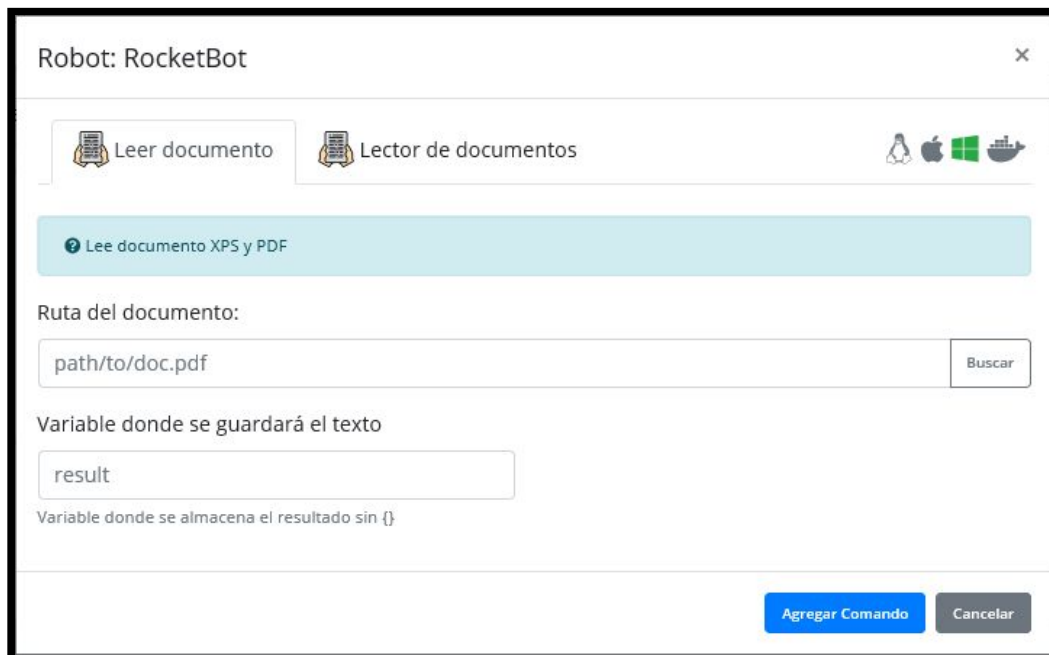

1. Ir al menú “**Mods**” y abrir el módulo “**Lector de documentos**”:

2. **Leer documento.**

Para leer un documento, completar los siguientes campos:

- **Ruta del documento**
- **Variable donde se guardará el texto**

A screenshot of a configuration window titled 'Robot: RocketBot'. The window has a close button (X) in the top right. Below the title bar, there are two tabs: 'Leer documento' (active) and 'Lector de documentos'. To the right of the tabs are icons for Linux, Apple, Windows, and Docker. A light blue bar contains a plus icon and the text 'Lee documento XPS y PDF'. Below this, the 'Ruta del documento:' label is followed by a text input field containing 'path/to/doc.pdf' and a 'Buscar' button. The 'Variable donde se guardará el texto' label is followed by a text input field containing 'result'. Below the variable field is the text 'Variable donde se almacena el resultado sin {}'. At the bottom right, there are two buttons: 'Agregar Comando' (blue) and 'Cancelar' (gray).
